Express Checkout

The more convenient it is for your customers to buy from you, the more they'll buy. Express Checkout allows your customers to pay quickly using PayPal. Plus, your business enjoys the following benefits:
Give buyers more convenience, and get more sales. Your customers simply log in to use information they've already

entered with PayPal; they save time by completing transactions in fewer steps. This helps increase loyalty and sales. Complete sales on your website, and get more upsell opportunities. Buyers finish their orders on your website. This gives you more advertising opportunities.

Help customers feel safer, so they buy more. Buyers prefer to pay with PayPal because their customer information is kept safe. When they're confident about the security of their information, they purchase more.

What Is Express Checkout?

Express Checkout allows your customers to complete transactions in very few steps. It lets them use shipping and billing information stored securely at PayPal to check out, so they don't have to re-enter it on your site.

It's an API-based feature that can be used along with the PayPal Direct Payment API, which lets you process credit cards directly on your website.

How It Works :

After selecting products to purchase, your customer chooses to checkout with PayPal.

They're transferred to PayPal to select the payment method and the correct shipping and billing address and returned to your website to complete their purchase.

PayPal automatically gives you the shipping address, email, and other customer information needed to fulfill your order.

With Express Checkout, your buyers finish their orders on your website, not PayPal's, so you can:

Get real-time notification of successful payments

Automate your internal business processes

Ensure buyers make it to your final confirmation page

Be notified that the buyer's address is confirmed, and ensure you're eligible for coverage under PayPal's Seller Protection Policy

Get the Advantages You've Come to Expect From PayPal:

Our industry-leading fraud-prevention measures help you do business safely

Tens of millions of people from more than 103 countries and regions around the world use PayPal everyday, providing your products exposure to a large, and fast-growing, group of loyal online buyers

PayPal is proven to attract new customers for our merchants

IPN Standard payment

The easy way to get paid.

Accept credit cards online, plus bank transfers, PayPal, and more. Website Payments Standard is:

Fast. There's no lengthy approval process and no shopping cart needed. Start accepting payments today.

Easy. Customers shop on your website and pay you on PayPal. They don't even need a PayPal account.

Low-cost. No monthly, start-up, or cancellation fees – and no annual commitment.

Customers shop on your website and pay on PayPal.

Sell easily and get paid fast with the shopping cart option that fits your business scenario:

If you already have a shopping cart, PayPal works seamlessly with hundreds of compatible carts or custom-built storefronts.

If you don't have a shopping cart, set up the free PayPal Shopping Cart quickly and easily—or choose from many other popular, compatible carts.

Sell one item at a time, or collect recurring payments:

Easily begin to receive payments on your website. There's no shopping cart needed.

Automatically accept subscriptions.
Take donations simply.
Easily collect recurring payments.

Plus, with Website Payments Standard, you can take advantage of:

Increased sales opportunities. Accept credit cards by phone, fax, or mail with Virtual Terminal – for only \$20.00 USD a month.

Flexibility. Accept donations, subscriptions, and recurring payments.

Industry-leading security. Our fraud-prevention systems are among the best in the industry. And we specialize in fighting chargebacks for you.

Detailed online reports help you measure sales and easily manage your business.

Shipping and sales tax tools automatically calculate and collect shipping and tax fees for you.

Installation guide

There are several ways this module can be installed :

install it on a fresh install of OsCommerce (recommended)

install it on an already working and tuned OsCommerce.

Whatever the install you choose, we do insist on you to **backup your files before doing anything else** . PayPal is **NOT** responsible of any data loss or business damage regarding this installation.

Prerequisites

You have to subscribe to PayPal with a premier or a business account. We suggest you go first with a developer account on PayPal's sandbox before going with the live server. You have to generate a certificate on PayPal 's administration interface and get a login and password to access the API .

In case you want to use Standard Payment (tm) and IPN, you have to be sure PayPal's servers can access the «catalog/ext/modules/payment/paypal_ipn/ipn.php» script on your server.

New OsCommerce install

Backup your existing files

In the «catalog» directory, backup the following files

checkout_confirmation.php

checkout_payment.php

checkout_shipping.php

checkout_success.php

create_account.php

login.php

product_info.php

shopping_cart.php

MySQL configuration

If you have a direct access to your database, you should source the content of the file «paypal_ec.sql» in the mysql console

```
mysql your_database -u db_user -h db_host -p < paypal _ ec . sql
```

If you don't have direct access to your MySQL database then, we do provide a PHP script that uses OsCommerce database settings and contains the accurate SQL. Just upload it into the OsCommerce server's «catalog» directory and call it with your browser :

http://your_server_name.ext/path_to_catalog/install.php

If successful, the script should display the message : «The data importation was SUCCESSFUL». Once done, you can delete this file from your server.

Install module's files

If you have a SSH or another console access to your server, it should be as simple as

```
cp -r paypal _ ec / catalog /* /path/to/your/ oscommerce / catalog /
```

If you do not have a console access, then you may have to transfer the files one by one with your favorite transfer tool (filezilla or others). See the following chapter if you want to select what file you may specifically need.

Existing OsCommerce install

We strongly advise you make backups of your existing OsCommerce installation before beginning with the installation.

MySQL configuration

The paypal Express Checkout (tm) system needs to have two fields named «customers_paypal_payerid» and «customers_paypal _ ec »in your "customers" table. Check if you do not have such fields already before going further. If you do not, you should follow the MySQL steps as described in chapter 2.1.3.

```
ALTER TABLE `customers` ADD `customers_paypal_payerid` VARCHAR( 20 );  
ALTER TABLE `customers` ADD `customers_paypal_ec` TINYINT (1) UNSIGNED DEFAULT '0' NOT NULL;
```

Copying files

The directory «includes» and «ext» can be copied as is. They normally do not overwrite any existing files. Copy the file«catalog/ec_process.php» on the server. Now we have to integrate change on existing files.

You can either choose to select code from this document or you can use the diff files that come with the module in the patch subdirectory.

In the folowing section, you will see the part in original files to modify to know what's different.

colour conventions :

```
This line has to stay as is in the original code  
This line has to be striped out from the original code  
This line has to be added to the original code
```

catalog/checkout_confirmation.php

Change 1:

```
$comments = tep_db_prepare_input($HTTP_POST_VARS['comments']);
}
//---PayPal WPP Modification START ---//
if (tep_paypal_wpp_enabled()) {

Express Checkout

Enable this Payment Module

Choose « yes » if you want to enable this payment module.

Debug Mode

If you tick « yes », usefull debugging infos will be displayed in case of errors (do not set in production, if you are not sure say « no »).

Live or Sandbox API

The sandbox API allow you to perform fake operations for testing purposes. Switch to live once you are sure everyhting is fine with your installation. (production systems should be set to « live », « sandbox » otherwise).

API Certificate

The full path of the certificate file on the server's hard drive. (mandatory).

API Username

The API username provided by PayPal. (mandatory)

API Password

The corresponding password to use the API. (mandatory, given by PayPal).

Proxy Address

In case you can't directly access internet from your webserver, you can specify a proxy here. If you are not sure, let it blank.

Transaction Type

Could be either « sale » or « autorisation ». Choose « sale » if you are running a standard business sale.

Express Checkout: Confirmed Address

This is valid only for countries that are part of the « confirmed address » programm (US, UK, Canada, Australia...). If you are not sure say « no ».

Express Checkout: Display Payment Page

One more screen between PayPal's checkout and purchase to display all the informations. If you have spexial discounts available at that page say « yes» otherwise say « no ».

Express Checkout: Automatic Account Creation

This options allows the module to create automatically an account on your OsCommerce from the data given by PayPal after successful checkout. If you are not sure, you might want to say « no » here.

Default Transaction Currency

If you want every transaction using the same currency, choose it here. If you are not sure, let it blank.

Sort order of display

The order this payment method will be on the payment page. Let default value if not sure.

Payment Zone

If your business is limited to an area, select it here. If you are not sure, let it blank.

Set Order Status

Show Express Checkout on product page

If you want to display a PayPal Express Checkout button on products page, tick « yes ».

IPN Standard payment

Enable PayPal IPN Module

Tick « yes » if you want to enable PayPal standard payment. This will allow user to pay with a credit card via PayPal.

E-Mail Address

Your IPN seller registration email.

Set Preparing Order Status

State of the order before IPN. (let default value is unsure)

Set PayPal Acknowledged Order Status

State of the order when successful IPN (let default value is unsure)

Set PayPal Completed Order Status

State of the order once the payment process is over. (let default value is unsure)

Transaction Type

Either you want to receive a notification for the order or each item. We do advise you to select « agragate » here.

Move tax to total amount

If you want the VAT to be included. In unsure say « yes ».

Page Style

If you have a special kind of page at PayPal. If you have no heard about that, let blank.

Debug E-Mail Address

You can receive IPN content by mail for debugging purposes. If unsure say « no ».

Enable Encrypted Web Payments

If you want to use encrypted connections. If not sure, say « no ».

Your Private Key

Encryption private key.

Your Public Certificate

Full path to public certificate.

PayPals Public Certificate

Full path to PayPal's public certificate (given by PayPal).

Your PayPal Public Certificate ID

Certificate identifier.

Working Directory

A temporary directory (need to be writable), usually /tmp or /temp. Default value is fine.

OpenSSL Location

Normally, OpenSSL binary path. May be different if you use dedicated hardware for encryption.
